AI USE DISCLOSURE

AI TOOL USED: Claude (Anthropic)

HOW IT WAS USED

Used Claude to check my set of ten organic compound slides (propane, ethanol, acetone, acetic acid, ethyl acetate, cyclohexane, cyclohexanone, acetaminophen, aspirin, and caffeine), each shown as a molecular formula, Lewis structure, condensed structural formula, and bond-line formula. Claude explained the conventions for writing condensed formulas (grouping repeated units and using ring-closure numbers for caffeine), reviewed the slides for errors, and flagged mistakes in two of the condensed formulas (ethyl acetate and caffeine), which I then corrected and had re-checked.

I remain fully responsible for the correctness of every claim, structure, and formula in this submission, as required by the CHEM 13 syllabus.
